Jennah,

A few comments - dive team didn't do sampling, just an inspection – they found the displaced rock area by manual probing. Sediment sampling will happen in future, probably January, in the displaced rock area but haven't received draft delineation/repair plan yet from PRPs – expect draft approx. Monday. Also, ground water, surface water, pore-water in cap, and additional sediment draft sampling plans under review now with sampling occurring next Spring.

Here is my draft desk statement:

During recent inspections of the San Jacinto Waste Pits superfund site, the EPA dive team discovered evidence of erosion on a portion of the underwater cap. The divers sampled water near the erosion to determine whether any contaminants had leaked through into the San Jacinto River. The sampling results will be available \_\_\_\_, which will allow EPA to better understand potential concerns. The potentially responsible parties for the site are drafting a plan to repair the erosion and will submit their plan to EPA soon. EPA will continue sampling sediment and water around the area of erosion, and develop a plan to enhance inspection at the site.

Carl wants to review the draft Fact Sheet, Communication Plan and Press Statement before he sends it to David Gary and Ron, hopefully this morning.

Ron may or may not request a full briefing after he looks at the information. Thanks CAS

**Subject:** RE: San Jacinto Status.

I have a draft communication plan on current outreach events, and working with Ext. affairs on a statement.

Thx,

---

Donn,

Could we have the communication plan and press statement by early tomorrow morning?

We almost have the Fact Sheet Ready (waiting on dates from the PRPs) and Pam wants us to send to David Gray and Ron the Fact Sheet, Communication Plan, and Press Statement together.

Here is the draft Fact Sheet that may help with the press statement. Thanks CAS
